Pianos:
The Loud and the Soft

Suppose a friend said, “I want to play the soft-loud!” You might be puzzled. What your friend means is that she wants to play the piano.

The piano was created in Italy in 1700. Before this time, many people played harpsichords. Harpsichords, too, have a keyboard and strings inside a wooden case. However, on a harpsichord, the player cannot control how loud the tones are. In contrast, the notes on a piano can be played softly or loudly. The Italian words for softly and loudly are piano and forte. That’s why the instrument was named the piano-forte, or soft-loud.

By the 1800s, pianos became less expensive, so many families could buy one. Pianos were also built in different shapes, which could fit into many homes. In Germany and Australia, pianos were even built into sewing tables so women could both play the piano and sew.

How does a piano make its sound? The white and black keys on the keyboard are connected to strings inside the instrument. One to three strings are connected to each key. Low notes have one string and high notes have three. When a key is pressed, a felt-covered hammer hits the strings, which vibrate to produce a note. Each of the piano’s 88 keys plays a different note. As in other instruments with strings, the piano’s wooden body amplifies the sound.

You might think that the piano is in the string family because its notes are made with strings. However, the piano is a percussion instrument. The percussion family includes drums, cymbals, and other instruments that make sounds when someone hits them.

Today, there are acoustic pianos and electric pianos. Acoustic pianos do not use amplifiers. In contrast, electric pianos need amplifiers to make sounds. Electric pianos are often used whenever people move their pianos around. You may have seen an electric piano in your favorite rock band. Today, the “soft-hard instrument” is everywhere!
Pianos: The Loud and the Soft

Write all these words in the right places to complete this puzzle, which tells some things you learned about pianos. You can reread the article before you begin, but don't look back at it while you are working. After you've completed the puzzle, read it to someone.

Have you ever ____________________________ a piano? Do you know how the piano makes different ____________________________?

If you could look inside a piano, you’d see that the white and black keys are ____________________________ to strings. When you press a key, a ____________________________ hits the strings. The strings ____________________________, or move back and forth, and produce the sounds. Pianos have ____________________________ keys, and each one plays a different note. Low notes have just ____________________________ string, but high notes have three.

Even though pianos have strings, they are not called ____________________________ instruments. Instead, pianos are called percussion instruments. ____________________________ and cymbals are percussion instruments, too.

Percussion instruments make sounds when someone ____________________________ them.
Write keywords or phrases that will help you remember what you learned.
