Bots in the Classroom

Little robots move across the classroom floor. We call these small robots “bots” for short.

The children watch as the bots move quickly under chairs and tables. The teacher presses buttons on a small machines with her thumb. This makes the bots hop, stop, and go.

The children clap with joy when the bots pick up toys. “Look how these smart bots work as a team!” says the teacher.

Bots come in many sizes. Some are big and some are small. Some move fast and some move slow. The class loves to watch all five bots zoom from one side of the room to the other.
