

From Gannett, R. (1948). *My Father's Dragon*, Chapter 1 (partial)

My Father Meets The Cat

One cold rainy day when my father was a little boy, he met an old alley cat on his street. The cat was very drippy and uncomfortable so my father said, “Wouldn’t you like to come home with me?”

This surprised the cat—she had never before met anyone who cared about old alley cats—but she said, “I’d be very much obliged if I could sit by a warm furnace, and perhaps have a saucer of milk.”

“We have a very nice furnace to sit by,” said my father, “and I’m sure my mother has an extra saucer of milk.”

My father and the cat became good friends but my father’s mother was very upset about the cat. She hated cats, particularly ugly old alley cats. “Elmer Elevator,” she said to my father, “if you think I’m going to give that cat a saucer of milk, you’re very wrong. Once you start feeding stray alley cats you might as well expect to feed every stray in town, and I am not going to do it!”

This made my father very sad, and he apologized to the cat because his mother had been so rude. He told the cat to stay anyway, and that somehow he would bring her a saucer of milk each day. My father fed the cat for three weeks, but one day his mother found the cat’s saucer in the cellar and she was extremely angry. She whipped my father and threw the cat out the door, but later on my father sneaked out and found

the cat. Together they went for a walk in the park and tried to think of nice things to talk about. My father said, “When I grow up I’m going to have an airplane. Wouldn’t it be wonderful to fly just anywhere you might think of?”

“Would you like to fly very, very much?” asked the cat.

“I certainly would. I’d do anything if I could fly.”

“Well,” said the cat, “if you’d really like to fly that much, I think I know of a sort of a way you might get to fly while you’re still a little boy.”

“You mean you know where I could get an airplane?”

“Well, not exactly an airplane, but something even better. As you can see, I’m an old cat now, but in my younger days I was quite a traveler. My traveling days are over but last spring I took just one more trip and sailed to the Island of Tangerina, stopping at the port of Cranberry. Well, it just so happened that I missed the boat, and while waiting for the next I thought I’d look around a bit. I was particularly interested in a place called Wild Island, which we had passed on our way to Tangerina. Wild Island and Tangerina are joined together by a long string of rocks, but people never go to Wild Island because it’s mostly jungle and inhabited by very wild animals. So I decided to go across the rocks and explore it for myself. It certainly is an interesting place, but I saw something there that made me want to weep.”

Reflect and Respond: Activity 2 (Grade 2–3, Informational Text)

From K. V. Kudlinksi (2005). *Boy, Were We Wrong about Dinosaurs!*

New York, NY: Penguin Young Readers Group. (pp. 8 & 10–12)

Scientists used to think all dinosaurs were scaly, because a few fossil skins showed bumps that look like scales. Now more fossils have been found with marks that seem to be from feathers. What did dinosaurs have on their skin: bumps, scales, or feathers? We can only guess, but we have some good ideas.

Because big animals lose heat more slowly, we think that the big dinosaurs, like the big elephants of today, wouldn't have needed fur or feathers to keep themselves warm.

In the last few years, fossils of many kinds of little dinosaurs have been found. Some grew no bigger than pigeons. These small animals needed some way to

keep from losing their body heat. Some of the fossils show warm, fluffy feathers like a baby chick's. Others show long feathers like a rooster's.

Scientists used to think that large dinosaurs were gray, like today's gray elephants. But if that were true, bigger meat-eating dinosaurs would be able to see these gray dinosaurs against colorful leaves and grasses, and they would be eaten. Now scientists think that dinosaurs had colorful patterns that protected them from being found and eaten. Colors and patterns also probably helped dinosaurs show their sex and age to other dinosaurs, the way birds do.
